

Your presentation - Schedule

Date	Time	Group	Place
Monday 13 th November	10:30-12:10	P1-P10	B1-204
	14:00-15:40	M1-M10	
Tuesday 14 th November	08:30-10:10	P11-P20	B1-303
	14:00-15:40	M11-M20	D1-402

- Submit your slides after your presentation by 13th/14th November
- File name '**XX EXP1-3 Presentation**' (XX is your group number)
- Decide on who will be the presenter (at least 3 people)
- Decide on how you will present and how you will make your presentation standout!!!

Your presentation - Content

Your design brief will need to cover the following points:

- Energy storage device working principal
 - what type of energy you've stored and how
- The material it is to be made from and why
 - the source from which you plan to obtain your materials from
- The method of fixation to attach it to the vehicle
- The drive mechanism that you will adopt
 - e.g., front wheel driving; and how the released energy would force the car drive
- How you will calculate the amount of energy stored in the device
 - List essential equations that you have used
 - Include your pre-testing results, plot the according graph and explain the calculation process (e.g., potential energy loss estimation)
 - Show how you made your prediction based on your pre-testing results.

Your presentation - Procedure

1. Please copy our presentation in the according folder on the desktop of the computer at the beginning of the class.
2. Please give a 8-10mins presentation.
There will be someone to keep time. You would get a reminder at 9 mins and if you overrun the time, you would get mark deducted.
3. If the team are disorganised (i.e. slow to start, not clear, not focused, wasting time etc.) you would get mark deducted.
4. After your presentation, there would be an 2-3 mins Q&A.
You will be asked questions especially the principle and your energy calculation; or you will receive some feedback.
