

Question 1

What are the values of yield strength, tensile strength & ductility after cold working Copper?

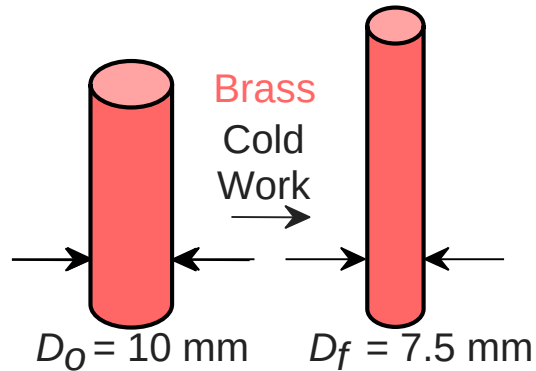

Use the figures below to deduce your answers, adapted from Fig. 7.19, Callister & Rethwisch 8e.

Question 2

A cylindrical rod of brass originally 10 mm in diameter is to be cold worked by drawing. The circular cross section will be maintained during deformation. A cold-worked tensile strength in excess of 380 MPa and a ductility of at least 15 %EL are desired. Furthermore, the final diameter must be 7.5 mm. Explain how this may be accomplished.

Use these figures adapted from Fig. 7.19, *Callister & Rethwisch 8e*, to deduce your answers
