

Material Science 2

Materials and the Environment (Contd)

Introduction to week 15

Dr Adijat 'Wumi Inyang (a.inyang@qmul.ac.uk)

Aims for the week

1

Explain the importance of sustainability in the design of materials

2

Outline methods for materials processing: microstructure and properties

3

Understand the design for environment principles using examples

Learning outcomes

Link

Link the microstructure of materials to properties and sustainable concepts

Apply

Apply Life Cycle Analysis (LCA) concept to assess the sustainability of material during design

Practice

Practice questions to enhance learning sustainable strategies

Outline for the week

Monday: Live stream lecture
and Q&A session

Wednesday: Live stream
lecture, MS2 revision and
solving questions in class

Thursday: Solving questions
in class, topics to read for
final exams

Skills

Apply concepts
explained in class
(LCA)

Evaluate options for
including
sustainability in
materials design

Research

Communication with
peers (peer-review)

Professional skills
(giving feedback)

Technical English

Communication for this module

WeCom work groups: during class. This is not monitored outside class time

Qmplus forum: any question outside class time

Email: personal issues, not related to homework, class material, module content
