

QXU5017 EXP2-4 Report Marking Criteria

Criteria	Excellent (80-100%)	Good (65-79%)	Fair (50-64%)	Needs improvement (0-49%)	Points
Introduction	- Clearly and succinctly explains the aim of the experimental plan. - Objectives are specific, relevant, and well aligned with the investigation.	- States the aim and objectives with minor lack of clarity or specificity. - Purpose is mostly aligned with the experiment.	- General or vague description of aims and objectives. - Some relevance to the experiment, but lacks focus.	- Aim and objectives are unclear, incomplete, or missing. - Limited or no relevance to the actual investigation.	4
Calculations	- All main effects are correctly identified and clearly explained. Shows full understanding of their meaning and relevance. - Clearly explains relevant interactions with good reasoning. Shows clear understanding of combined factor effects.	- Most main effects are correctly identified. Explanation is generally clear with minor omissions. - Identifies key interactions with basic explanation. May miss or simplify some aspects.	- Some main effects are identified but explanation lacks clarity or completeness. - Mentions some interactions but lacks explanation or accuracy.	- Main effects are missing, unclear, or incorrect. - Interactions are missing or not explained properly.	16
Factors	- Clearly identifies which factor(s) and interacted factor(s) influence the process and explains why, using data or logical reasoning. - Accurately highlights the most important factors with strong justification. - Accurately identifies non-significant factors/interactions with explanation based on small or inconsistent effects.	- Identifies key factor(s) and interacted factor(s) with reasonable explanation, though may miss minor details. - Identifies important factors with general reasoning. Some minor omissions. - Reasonably identifies unimportant items, though explanation may be limited.	- Mentions some factor(s) and interacted factor(s) but explanation is limited or unclear. - Mentions some important factors but lacks clarity or detail. - Mentions some less important items, but reasoning is unclear or incomplete.	- Factor(s) and interacted factor(s) are incorrect, vague, or not addressed. - Importance is not addressed or factors are misunderstood. - Fails to identify or incorrectly classifies unimportant elements.	30

Criteria	Excellent (80-100%)	Good (65-79%)	Fair (50-64%)	Needs improvement (0-49%)	Points
Blamestorming	- Clearly and correctly connects all the experimental results to points raised in the conversation. - Shows strong understanding of how data confirms or supports the discussion. - Clearly identifies misleading ideas from the conversation and explains why they are incorrect based on the data.	- Makes relevant connections between main results and conversation points correctly. - Some explanations may lack detail. - Highlights misleading ideas with some explanation tied to results.	- Mentions the conversation with basic comparison to results but lacks depth or accuracy. - Mentions one or two misleading ideas but gives little explanation.	- Discussion is vague or disconnected from the conversation. - Limited or no reflection on the link with results. - Misleading points are not identified or are misunderstood.	15
Evaluation of Experimental Plan	- Provides a clear and accurate assessment of how the plan would identify the potential factors or detect reliability issues. - Provides specific justification based on the structure and design. - Provides a realistic and balanced evaluation resource demands, with clear justification.	- Provides a reasonable assessment of whether factors or reliability issues would be well identified. - Offers a general explanation, though it may lack depth or clarity. - Estimates time/resource needs with some justification, though it may lack detail.	- Mentions factors and reliability but gives minimal or unclear reasoning. - Makes a general statement but lacks detail. - Mentions time or resources but gives little supporting explanation.	- Does not address this question or explanation is incorrect or vague. - No meaningful discussion or understanding is incorrect. - No evaluation of time/resources or reasoning is unclear.	20

Criteria	Excellent (80-100%)	Good (65-79%)	Fair (50-64%)	Needs improvement (0-49%)	Points
Proposed Actions	- Provides clear, accurate, and professional advice and action plan for company based on findings. - Balances technical accuracy with customer communication. - Clearly recommends specific, relevant controls to manage the process or reduce variation.	- Gives reasonable advice and action plan to the company with some link to findings. May lack clarity or completeness. - Makes useful connections between results and process improvement. - Suggests appropriate controls with some reasoning for further investigation.	- Mentions what needs to be done by the company but explanation is basic or vague. - Gives basic suggestions for process or potential improvement. - Mentions a few controls, but they may be general or weakly justified.	- Advice or action plan is missing, unclear, or not based on findings. - No discussion or vague mention of process improvement. - No controls suggested, or suggestions are irrelevant or unclear.	15
Quality of English and Reference	- Exceptionally well-written, no errors, and perfectly formatted references. - Filename, report title, spreadsheet title, authors are clear and correct.	- Well-written with minor grammatical or referencing errors. - Filename, report title, spreadsheet title, authors are mostly correct.	- Acceptable writing with noticeable grammatical errors or referencing issues. - Filename, report title, spreadsheet title, or authors are incorrect or missing.	- Poor writing, frequent errors, and inadequate or incorrect references. - Filename, report title, spreadsheet title or authors is missing.	0
